EtherFast® Cable/DSL Router

Share Broadband Internet Access With Your Entire Network

Do you find sharing Internet access to be nothing but a hassle? Can't find a simple and inexpensive way to share your one Internet IP address over your entire network? If so, then the EtherFast® Cable/DSL Router is exactly what you're looking for.

The EtherFast® Cable/DSL Router provides the perfect solution for connecting up to 253 users to a high-speed broadband Internet connection. The Cable/DSL Router's design also serves as the ideal device for a single-PC environment. Configurable as a DHCP server for your existing network, this Cable/DSL Router acts as the only externally recognized Internet gateway on your local area network (LAN), serving as a firewall against unwanted outside intruders. The Router can also be configured to block specific users' access to the Internet.

But the features don't stop there. The Cable/DSL Router features advanced Internet functions such as dynamic and static port routing, remote administration, DMZ hosting, filtering and forwarding. All of these functions can be easily configured through your networked PC's Web browser.

Share Your Broadband Internet Connection

Instant Broadband™ 1-Port Cable/DSL Router (BEFSR11)

Benefits
