THANK YOU!

Thanks for choosing Keyscaper! This manual will get you started with your Portable Charger. Please read the following manual carefully to ensure you get the most out of your charger.

Product Guide:

1. Battery Level Indicator
2. Output: 5V/2A
3. Output: 5V/1A
4. USB port (Output)
5. On Switch
5. Micro USB Port (Input)

SETUP: Charging the internal battery.

Although your charger was shipped pre-charged, it’s a good idea to top it up before you get going.

1. Use the adaptor cable coupled with the Micro USB tip. Plug the Micro USB end into the Power Input port of the charger. Then plug the USB end into the USB port of a computer, wall charger, or other USB power source.
2. Charging will automatically start. The battery level indicator will show you the level of charge.

3. When all four lights stay on without flashing, the battery is fully charged. Your charger will automatically stop charging when it is full.

USE: Charging your mobile device

• Using the adaptor cord or the USB charging cord that came with your device (you will need this for any iPhone 5/iPod 5 or newer), plug the USB end into the Power Output port of your charger. Plug the other end into your device.

• Press the “On” witch to begin charging. The charging light will stay on as long as charging is in progress. Your charger will automatically select 1 Amp or 2 Amp charging mode.

• Your charger can carry 4000 milliamps of power. Depending on the capacity of your mobile device, the amount the Portable Charger will charge your device will vary. Typically, 4000 milliamps is sufficient for a full charge of a smartphone.

ADDITIONAL SPECS:

• Input: 5V/1A

• Output 5V/1A, 5V/2A

• Capacity: 4000 mAh

• Weight: 115g

• Battery Type: Lithium Polymer

• Conversion Efficiency: Above 80%
• Charging Time: 5 Hours
• Battery Life: More than 500 cycles

ADDITIONAL SUPPORT:
