## MASTERBUILT MFG. Inc. PRODUCT WARRANTY

MASTERBUILT Mfg., Inc. warrants all parts of this HITCH-HAUL® Motorcycle Carrier product to be free from defects in material and workmanship within one year from the date of purchase. Within this period, MASTERBUILT Mfg., Inc. shall correct any defect by repairing or replacing defective parts of the equipment, or making available the parts thereof, FOB Columbus, GA.

MASTERBUILT Mfg., Inc. shall not be obligated to repair or replace equipment which has been repaired by others, abused, altered, or misused. We further state that we shall not be held liable for any loss due to neglectful use on the part of the operator. Upon the expiration of such warranty, all liability shall terminate. No other warranties are expressed or implied.

**NOTE:** Paint finish will scratch and chip under normal use, and therefore carries no warranty.

*To validate your warranty, please complete Warranty Information and return to Masterbuilt Mfg. Inc. within 30 days of the date of purchase.*

Item No.	Description	Qty.
1	Bridge Support	2
2	Ramp	1
3	2" Receiver Bar	1
4	Ramp Support	2
5	Carrier	2

## HARDWARE LIST

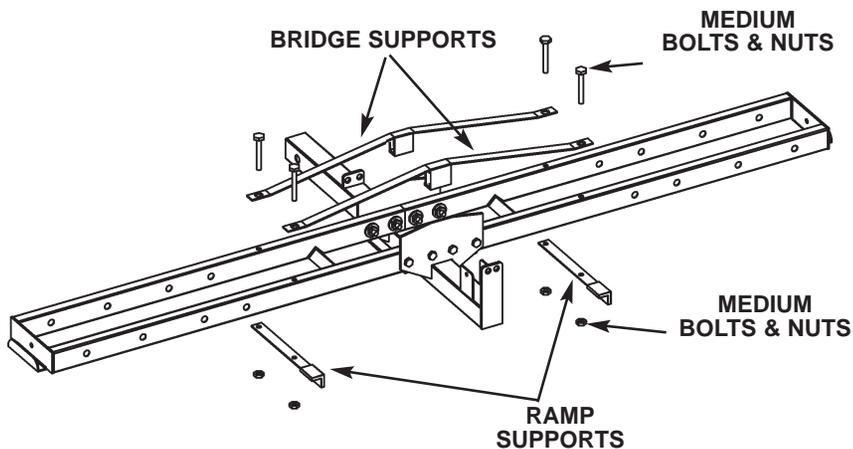

## ASSEMBLY INSTRUCTIONS

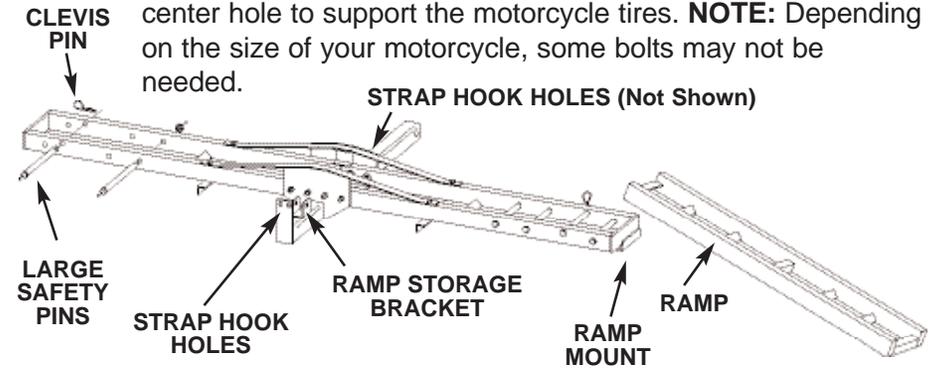

**STEP 1.** Place tire cradles inside support channel on receiver bar. Attach with 8 short bolts, washers and nuts. There are 4 nuts, bolts and washers per cradle. **Note:** The washer is placed onto the bolt first and then inserted from the inside out. The nut goes on the outside of the support channel.

**STEP 2.** Attach 2 bridge supports as shown and 2 ramp supports using 4 medium length bolts, washers and nuts. **NOTE:** When mounting ramp supports, make sure flat surface is up and the extra 3 inches is on the outside to support the ramp while transporting.

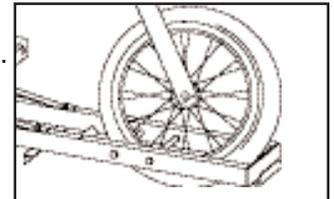

**STEP 3. PLACING THE LONG BOLTS.** The carrier is designed to load the motorcycle from the left or right side using the ramp. There are 3 sets of center holes and 1 set of upper holes on each cradle. The large safety pins and clevis pins are used in the upper holes. See FIG 5. The 4 long bolts are used in the center hole to support the motorcycle tires. **NOTE:** Depending on the size of your motorcycle, some bolts may not be needed.

## MOUNTING AND LOADING MOTORCYCLES

**IMPORTANT STEP:** The front tire of the motorcycle must rest down into the cradle and be secured with a large safety pin and clevis pin. This step is needed in case a strap is broken or comes loose during transport. A second safety pin is supplied. Depending on the size of your motorcycle, this pin may not be needed. If this pin is not used, secure the motorcycle tire with a strap. (not included)

Insert 2" receiver bar tube into the 2" receiver hitch and secure with a clevis pin. (Clevis Pin not included) This carrier will only mount into a 2" receiver only.

**STEP 1**

The loading ramp can be used on either side of carrier. Make sure lip of ramp is securely hooked into ramp mount.

**STEP 2**

With feet firmly planted and motorcycle in neutral, slowly guide motorcycle up loading ramp onto carrier. Use two people if necessary.
