

Magnetized Wireless Power Station

The Magnetized Wireless Power System

Exelium has developed a charging system for cell phones with the Qi technology - international standard for wireless charging - combined with the magnetic system of the UP line. With a simple "click" your phone magnetically holds to your unit and it starts charging. No need to continually plug in your cell phone to charge!

Magnetic Mobile receiver

Exelium has developed two magnetic mobile receivers, one for the Samsung Galaxy S5 and one for the Samsung Galaxy Note 4. Positioned on the phone battery with lining up the connectors (See Manual for instructions). This will equip your Samsung S5 or Note 4 with a magnetic charging patch that will be compatible with all the UP mobile stations. Simply attach and it starts charging!

One click to attach and charge

Once equipped with the mobile receiver, your phone may be fixed on any mobile station of the Up mobile line thanks to the magnetic system.

You can then take advantage of the Qi technology to charge without cable.

UPM100 Home Station

The home station UPM100 can be fixed on any surface, both horizontal and vertical thanks to its 3M adhesive tape. It will allow you to watch your videos and other applications while cooking, tinkering, etc., and it will charge your phone without any cable. One click to attach and charge.

UPM200 Car Station

The Car Station UPM200 features a suction cup to be fixed on the windshield or on the dashboard. Thus you can take advantage of the Magnetized Wireless Power System on your car, and use your phone in car without any cable trouble. Attach it and it will start charging!

UPM500 Office Station

The Office Station UPM500 is an easy way to charge your phone while having it handy for work or phone calls. Just click and it will start to charge! Thanks to the Magnetized Wireless Power System you'll be able to use your phone as you wish.
