

The 2008 Family Of 3M Performance Driven Solutions

New Product Introduction – 3M Do-It-Yourself Fuel System Tune-Up Kit

3M Car Care products provide performance driven solutions for Appearance, Performance and Maintenance & Repair needs. This new product line leverages the technology and expertise of 3M in a consumer product line that delivers the same 3M quality the pros have come to expect.

Because no engine is 100% efficient, carbon, resins, and varnishes will build up in critical engine components, causing a reduction in fuel economy, power and acceleration. Until now, car owners needed to have a professional fuel system service, which can be very costly. Now 3M has a great new way for the do-it-yourself consumer to get the maximum performance from their car. The 3M Do-It-Yourself Fuel System Tune-Up Kit allows your customers to perform a professional fuel system cleaning at home for less than 1/2 the cost they'll pay at a service center.

The 3M Do-It-Yourself Fuel System Tune-Up Kit maximizes fuel economy and increases power and acceleration in a vehicle. Descended from 3M's professional engine cleaning technology, this kit is about as easy to do as an oil change. With the rising price of gas, we are confident that customers will love the 3M Do-It-Yourself Fuel System Tune-Up Kit to help increase their mileage and get the ultimate performance from their vehicle.
